Below are examples of clinical rotations part of the CFHI Hospital Medicine and Infectious Disease Internships in Durban, South Africa. Rotations are subject to change based on organizational needs and availability. Students are encouraged to be open-minded and approach the program with a willingness to learn and grow, both professionally and personally.

**Tertiary Public Hospital**
The oldest and second largest hospital in South Africa and is the main teaching hospital for the University of KwaZulu-Natal's Nelson Mandela Medical School. Services include pediatrics, neonatal ICU, general surgery, emergency and trauma units, and an ARV clinic.

**Parochial Hospital**
Located in a semi-rural area of Durban, the hospital was established by Trappist monks who had previously operated out of mud huts. The hospital provides primary health care, OB/GYN, and comprehensive treatment for HIV/AIDS patients.

**Hospice**
The facility offers respite care for those in the final stages of chronic disease. It has an eight-bed in-care center, home based caretakers, and a day care center for adults and children; mainly serves an Indian population consisting of low and middle-income patients. Students will learn alongside nurses providing home based care and gain insight to understanding how to provide effective patient care for those facing life limiting or life threatening illnesses.

**HIV Clinic**
Is a not for profit care center that provides antiretroviral treatment, psychosocial support, legal advice, meal services, and prevention through outreach touching upon substance abuse, nutrition programs, and youth development. Students will learn about a holistic approach to care through observation in the clinic, as well as home care visits and participation in outreach programs.
